

Technical Code DVS 1612

Design and endurance strength analysis of steel welded joints in rail-vehicle construction

DVS, Technical Committee, Working Group "Welding in railway vehicle
manufacturing"

This publication has been drawn up by a group of experienced specialists working in an honorary capacity and its consideration as an important source of information is recommended. The user should always check to what extent the contents are applicable to his particular case and whether the version on hand is still valid. No liability can be accepted by the Deutscher Verband für Schweißen und verwandte Verfahren e.V., and those participating in the drawing up of the document.

Voransicht des Regelwerkes

Inhalt:

1. **General**
2. **Scope**
3. **Welding fabrication and quality assurance**
4. **Design and fatigue assessment of welded joints**
 - 4.1. Design principles
 - 4.2. The basics of design
 - 4.3. Fatigue strength assessment
 - 4.4. Fatigue strength values based on DV 952
 - 4.4.1. General
 - 4.4.2. Admissible values for fatigue strength assessment – MKJ diagrams
 - 4.5. Allocation of fatigue strength, weld quality class and safety need
 - 4.5.1. Design with fatigue strength values based on DV 952
 - 4.5.2. Strength design in accordance with other guidelines or regulations
 - 4.5.3. Specifications for converting weld quality class from DIN 6700 to DIN EN 15085
5. **Further information on the construction-type catalogue in Appendix B**
6. **References**

Appendix A: Technical codes and standards with specifications for the fatigue strength assessment of welded joints

Appendix B: Construction-type catalogue
